

# Agfa to debut Jeti Tauro H3300 UHS inkjet printer with varnish at C!Print 2023

At C!Print 2023 (France, 31 January – 2 February 2023), Agfa will showcase the fastest version of its high-end multi-pass Jeti Tauro H3300 inkjet printer family with varnish printing.

Mortsel, Belgium – 12 January 2023

Agfa's Jeti Tauro H3300 UV LED hybrid printer family is the perfect solution for larger print service providers, offering 24/7 productivity and award-winning quality at the lowest ink consumption on a wide range of rigid and flexible materials up to 3.3 m. The UHS (ultra-high speed) model achieves an impressive throughput of 905 m<sup>2</sup>/h.

Following the earlier introduction of varnish on the HS model, the UHS model now also comes with **varnish printing** at a speed of up to 150 m<sup>2</sup>/h, offering producers of corrugated cardboard displays the possibility to embellish prints by adding a layer of high-gloss or satin varnish, either applied to the entire surface (flood varnish) or selectively (spot varnish). All models can also use white ink, or white and primer. The inks on the Jeti printers are GREENGUARD Gold certified.

*"We are excited to present our latest printing solutions at C!Print", says Koen Steert, Head of Sales Sign & Display Europe at Agfa. "We look forward to welcoming print service providers at our booth to discuss their questions and needs, and to explore how our integrated offering of printers, inks, software, training and services can fit their growth paths and lead to sustainable success."*

One of the topics of discussion will no doubt be **automation and efficiency**, aspects that are built into the Jeti Tauro H3300 LED platform. All family members can be enhanced with semi- or fully automatic loading and unloading options for rigid media. They can also be fitted with different roll-to-roll printing solutions handling up to 700 kg per roll in both single- and dual-roll mode. An integrated camera ensures front-to-back accuracy.

Also adding to a more automated production process – with minimal manual interventions and thus errors, as well as limited printer idle time and very little waste – is Agfa's **workflow software**, which will be demonstrated at C!Print too. Asanti is a complete production hub that streamlines digital printing workflows through automated preflighting and advanced functionalities such as nesting and tiling. It relies on Agfa's award-winning color management technology and the latest version of Adobe's PDF Print Engine. Its intuitive production overview dashboard allows for efficient planning and follow-up of jobs.

In a dedicated **printing applications** area, visitors will be able to get a close look at a range of packaging and display samples (a.o. varnish prints), as well as vibrant signage samples produced on the Jeti Tauro H3300 and the Avinci CX3200, Agfa's next-gen textile printer that allows for printing on transfer paper and directly on fabrics up to 270 m<sup>2</sup>/h. Both printers cover significant media diversity and a wide range of applications,

enabling print service providers to cater to all their customers' creative wishes, while also inspiring and encouraging them to explore new directions.

*C!Print 2023 will take place in Lyon, France from 31 January until 2 February. Agfa can be found at stand 1F24. The Jeti Tauro H3300 UHS LED will be shown in a set-up with tables, printing plate media.*

## **About Agfa**

The Agfa-Gevaert Group is a leading company in imaging technology and IT solutions with over 150 years of experience. The Group holds four divisions: Radiology Solutions, HealthCare IT, Digital Print & Chemicals and Offset Solutions. They develop, manufacture and market analog and digital systems for the healthcare sector, for specific industrial applications and for the printing industry. In 2021, the Group realized a turnover of 1,760 million Euro.

## **About Agfa's Digital Printing Solutions business unit**

Agfa's Digital Print & Chemicals division drives the adoption of inkjet printing across various industries. We empower graphic printing and goods-producing industries to become more versatile and efficient through the innovative use of inkjet printing technology. We do so by analyzing their experiences, needs and challenges, and actively partnering with them and industry experts.

Our actual offering consists of in-house developed and designed high-quality inkjet printers, inks, software and services, either as an integrated perfectly matched solution or as customized components within a larger production process. Our offering is best in class in terms of quality, productivity, sustainability and cost of ownership, with impeccable service across the globe.
