EXMAR LAUNCHED FSRU CONVERSION WORKS FOR THE EEMSENERGYTERMINAL

EXMAR launched the conversion works for a new Floating Storage Regassification Unit (FSRU), advancing the long term expansion of the EemsEnergyTerminal (a subsidiary of Gasunie and Vopak). The move follows the signing of the conditional charter party covering both the extension of the existing Eemshaven LNG FSRU and a newly converted FSRU and is based on the intention of EemsEnergyTerminal to take conditional Final Investment Decision (FID) in the first half of 2026.

EXMAR has now secured the vessel for the conversion project, being a dual fuel diesel electric membrane LNG carrier. EXMAR also initiated engineering activities and ordered a 750 million standard cubic feet per day (MMSCFD) LNG regasification plant with Gas Solutions.

The conversion works are a next step in realising the continued operations of the EemsEnergyTerminal, with an anticipated configuration of two (2) FSRUs owned and operated by EXMAR. The converted FSRU would be positioned next to EXMAR's EEMSHAVEN LNG that remains on site. The terminal is anticipated to have a combined storage capacity of approximately 190,000 m³ LNG and a total regasification capacity of 1,350 million standard cubic feet per day (MMSCFD), with improved performance.

EXMAR's CEO Carl-Antoine Saverys stated: "By starting these works for the FSRU conversion, EXMAR and EemsEnergyTerminal continue to work towards an improved LNG import solution for Europe's energy security. This project reinforces EXMAR's unique experience in floating LNG infrastructure."

About EXMAR

EXMAR is a provider of floating solutions for the operation, transportation and transformation of gas, and owns a fleet of 40 LPG/ ammonia carriers and various floating LNG and offshore infrastructure solutions. EXMAR's Infrastructure business is centred on developing, constructing, owning and operating floating infrastructure for the global energy sector, providing solutions across the full project including engineering, asset ownership, and operational services. These capabilities position EXMAR as a turn-key provider of innovative maritime infrastructure in both LNG and broader energy value chains. Through decades of experience in Floating LNG solutions, EXMAR has positioned itself as one of the world's most innovative expert.
